Art Unit: 1631

### **DETAILED ACTION**

The art unit designated for this application has changed. Applicants(s) are hereby informed that future correspondence should be directed to Art Unit 1631.

### **Election/Restrictions**

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - I. Claims 1-7, drawn to a method of screening for the discovery of disease associated molecular targets for diagnostic or therapeutic intervention, classified in classes 435 and 702, subclasses 6 and 19. If this Group is elected, then the below summarized specie election is also required.
  - II. Claims 8-22, drawn to a method for individualized imaging of a patient tissue, classified in classes 435 and 702, subclasses 6 and 19. If this Group is elected, then the below summarized specie election is also required.

### **SPECIE ELECTION REQUIREMENT:**

2. This application contains claims directed to the following patentably distinct species of the claimed invention:

#### **FOR GROUP I**

#### Species (A):

3. Species of *in vivo* imaging are cited in claim 7, which are generally separately analyzed and published, and thus document the undue search burden if searched together. Thus, applicants are required to select an unspecified type of *in vivo* imaging or a type of *in vivo* imaging from those listed in claim 7.

Art Unit: 1631

4. Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, claims 1-7 are generic to the above species in all Groups.

**FOR GROUP II**

Species (B):

5. Species of ECF agents are cited in claim 11, which are generally separately analyzed and published, and thus document the undue search burden if searched together. Thus, applicants are required to select an unspecified type of ECF agent or a type of ECF from those listed in claim 11.

6. Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, claims 8-22 are generic to the above species in all Groups.

7. Applicant is advised that a reply to this requirement must include an identification of a specie from list of specie sets cited above that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

8. Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after

Art Unit: 1631

the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

9. Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

10. The inventions of Groups I and II are distinct inventions because they are directed to different methods regarding the critical limitations therein. For Group I, the critical limitation is a method of screening for the discovery of disease associated molecular targets for diagnostic or therapeutic intervention. For Group II, the critical limitation is a method for individualized imaging of a patient tissue. The completely distinct critical features of each Group of the inventions support the undue search burden if they were examined together. Additionally, each method of use has been most commonly, albeit not always, separately characterized and published in the Biochemical literature, thus significantly adding to the search burden if examined together as compared to being search separately.

11. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

12. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

13. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

14. Papers related to this application may be submitted to Technical Center 1600 by facsimile transmission. Papers should be faxed to Technical Center 1600 via the PTO Fax Center located in Crystal Mall 1. The faxing of such papers must conform with the notices published in the Official Gazette, 1096 OG 30 (November 15, 1988), 1156 OG 61 (November 16, 1993), and 1157 OG 94 (December 28, 1993) (see 37 CFR § 1.6(d)). The CM1 Fax Center number is either (703) 308-4242 or (703) 305-3014.
